

## Made in Bulgaria

What started with a trapezoid has become a portfolio, with a variety of modular school furniture. Years ago, we realized that teachers were hampered in their efforts to implement collaborative learning in the classroom. It was obvious that the classical tables could not be arranged in compact groups of four to eight students. The challenge was to create a range of mobile cluster tables offering flexibility and freedom in creating groups for teamwork or individual work. POLY table on page 26.

We have progressed beyond the main functionality in the grouping of student furniture. No one offers more options for choosing forms that allow grouping to work in small groups. All of these options are available in a variety of colors and decors. We have expanded the category to such an extent that you can choose the furniture on the basis of which to create an aesthetic and harmonious atmosphere in the classroom.

We have developed an innovative concept for children's modular cabinets and shelves. We created a design with a safety rounding of the external front details and removed the protruding handles. We designed bulky drawers with wheels for full pull-out and free movement in the whole room, on page 54. We also developed a series of children's tables and chairs in the same style, allowing creative design of beautiful playgrounds. We also added cabinets with plastic containers.

When it comes to how to furnish the office, take a look at our modular desk systems. Elegant solutions with metal legs and various complementary elements, creating an individual look and atmosphere in the workplace. Meeting tables, various shelves and cabinets for documents. Functionality in the furniture, combined with modern style and creative approach. Page 62.

Mebeli B&B Ltd. is a productive company with an active position on the Bulgarian market. The company is using the trade mark Mebel Factor, created in 1998. Initially, the company established an installation for electrostatic powder coating and worked in the service sector. Following the pre-development objectives a production of tubular furniture was organized at the beginning of 1999.

According to the dynamic development of the market conditions in Bulgaria, the company develops and manufactures nomenclature of chairs and tables for different purposes. The firm follows to the current norms and standards in the furniture industry in particular standards for furnishing of schools, kindergartens and other public institutions. All products have a contemporary and modern outlook as well as functionality. The company can be distinguished by professionalism, innovation, teamwork, respect for the customer, quality products and reasonable prices.

Highly qualified staff works in Mebeli B&B Ltd. In the process of the development of the company, we have created a system of in house training and adopting new technology. Through the years our team has become an effective structure of motivated workers, able to respond flexibly to any problem. Company staff, as well as the specialized, highly productive equipment are the guarantee for a flexible response to market changes and excellent co-operation with many partners. Currently the company has employed 24 people, 20 of which are workforce. Activities take place in our own base with total area of 3500m<sup>2</sup>, of which 1500m<sup>2</sup> are manufacturing area.

Design, production and delivery of:

- furniture for schools and educational institutions
- furniture for kindergartens and children centers
- metal frame furniture
- metal household furniture
- furniture for public establishments
- office furniture
- specialized library furniture
- commercial furniture
- production of metal structures
- component metal parts
- tubular furniture frames
- bending of metal pipes and profiles
- electrostatic powder coating
- specialized wire products

Children are the most important part of a society. That is why we, the adults, need to concentrate our efforts on their growth as healthy and fulfilled people. A main part of them growing up is the healthy development of the musculoskeletal apparatus. A correct posture means a strong and healthy spine. A child having a good posture and a strong body in the future is determined by how the youngster sits and positions himself every day in school. The posture is directly linked to an individual's self-esteem and their well-being in the future. Good physical development guarantees a good foundation for an individual's mental and bodily health.

School furnishing is often underestimated as a major factor in a child's growth. We, at "Mebel Factor", support the thesis that it is not correct for the furnishing in schools to aid the emergence of spinal distortions in kids. We support the claim that the decision for school furnishing should be done in a really careful fashion.

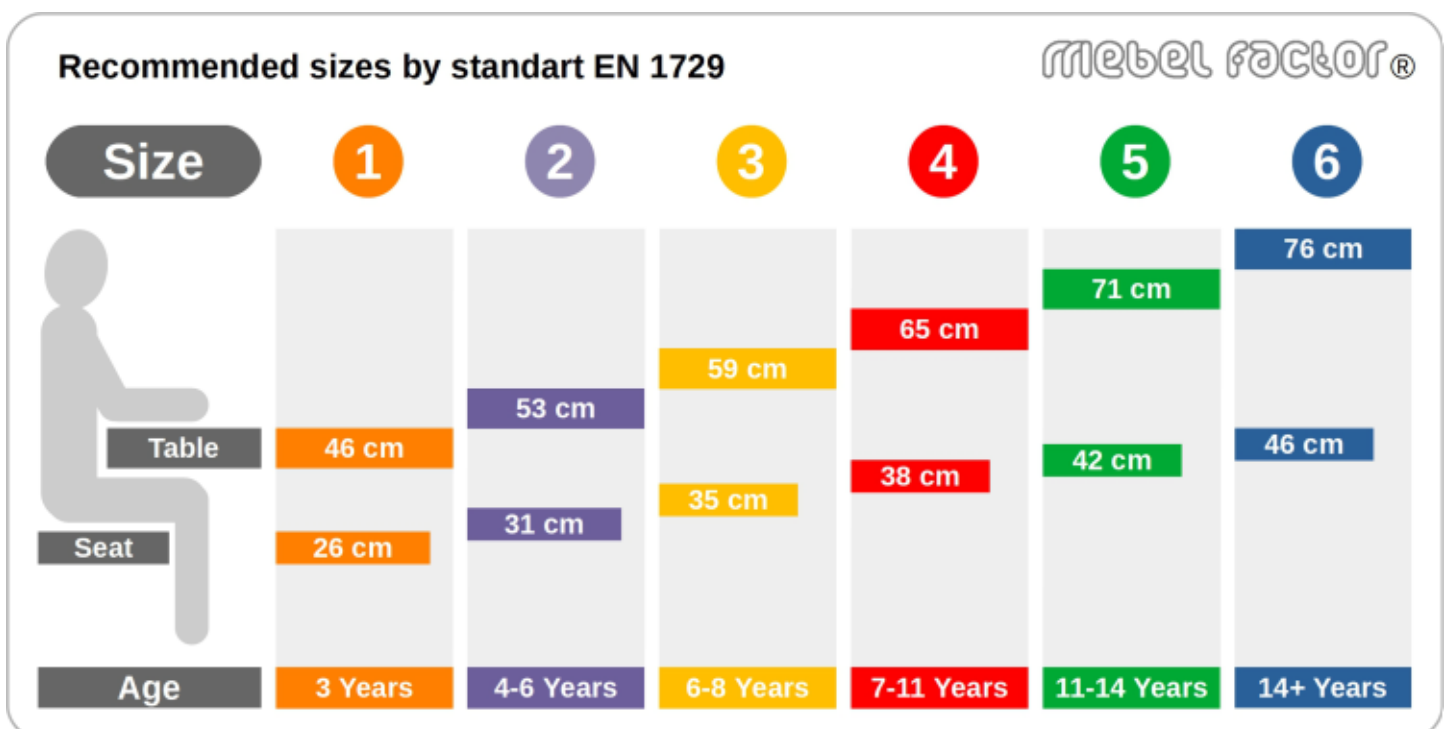

The spine has not finished its development at this young age, this is meant to happen when the youngster is 18-19 years old. Children spend many hours sat down on a table during school or home whilst learning and writing their homework. This makes the decision of the suitable furniture exceptionally important.

A primary principle that could guarantee this is the adequate height of the furnishing. The height should be determined by the age of the child. It is of utmost importance that the child, whilst sat down, has its feet firmly on the ground, while its knees form a right angle. Secondly, the torso and the hips need to form a second right angle. This is the so called "correct sitting posture". The compliance with these requirements would prove to be detrimental towards the protection of the child from scoliosis. When it comes to the desk or table, it needs to be at the least 70cm by 50cm. This is needed because the workspace needs to fit all needed supplies, as well as have space for the child to put its elbows on the edges of the desk or table.

The other "enemy" of a child's health, nearsightedness, should not be underestimated. Nearsightedness (or myopia) is a condition where objects near can be seen clearly but objects farther away can be blurry. In order to protect a child from this condition, they need to keep the so called "optical hygiene". This means that the child needs to have a distance between its eyes and the books placed on a desk, no less than 35cm, good lighting and a rest every 40 minutes.

If all of these conditions are taken into account, the body posture would be correct, the back will not be in a bad stance, which, on its own, would lead to a healthy physical development of the child's body.

"Mebel Factor" offers safe, rounded edges for its school tables and appropriate chairs, with a suitable height, taking into account the age of a child. The height of the desks and chairs are determined by the BS EN 1729 standard and are based on ergonomic research for children from the whole European Union. The dimensions are changed periodically due to the acceleration of growth in different generations.

## Chair PICO

School chair with reinforced, metal frame.  
Suitable for high-intensity study halls.

Maximum weight of the seated 150kg.  
Steel frame made of 25mm tube.  
Polymer powder coating in RAL colours.  
Seat and backrest made of 7mm beech plywood.  
Durable plastic glide plugs.  
Stackable up to 7 pieces.  
Made in Bulgaria.  
The product complies with EN 1729 standart.

## MakerHub Trolley with two magnetic whiteboards

MakerHub strollers are double-sided, which makes them ideal for group activities. A variety of containers can be used in MakerHubs, thanks to the flexible system of the basic storage module.

Wheels with a diameter of 75 mm for good mobility, with locking mechanism.

The standard dimensions of the whiteboard base 60x90cm allow quick replacement - just lift and pull. Switch between magnetic whiteboards, chalk boards or others to suit your activities in the classroom and age group. For added security, all standard boards are securely fastened in place between steel guides at the top of the frame and special fasteners on the shelf.

## MakerSpace Trolley

Mobile workstation for STEM projects and activities.  
Encourages students to be cooperative and creative.  
Helps in organizing the learning process.  
Easy relocation of tool hangers.

The set contains:

- Sturdy steel frame and locking wheels 75mm
- Side and back panels for accessories
- Runners with protection against falling of the container.
- 3 medium F2 containers
- 12 tiles of F1 container
- 12 mini containers
- 1 roller holder
- 5 single hooks and
- 5 double hooks

Suitable for loads up to 85 kg.

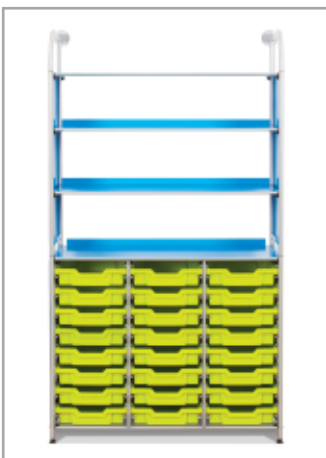

## Metal storage unit Callero

CALERO is a whole set of modular elements that can be used together or separately depending on your storage requirements. You can build up or build across to make sure you get maximum storage space in the space you have.

These are some of the most popular combinations that you can order as a set for your convenience. CALERO units are designed with the possibility of stable attachment to the wall.

Metal construction with powder coating RAL9006.

Options for stationary use and mobile units with wheels 50mm or 75mm.

## Together with Mebel Factor®

Designing a classroom according to the vision for the learning process is a challenge. A fundamental change in the world is making the 21st century classroom different from all previous solutions. The change comes from the widespread adoption of collaborative learning programs in an active environment. 21st century classrooms need to support them, because this will be the dominant model of education for the foreseeable future. Let's discuss your ideas together, evaluate and improve at the design stage.
